My Journey

I started my crypto journey as a blockchain consultant, working closely with founders, developers and digital-asset businesses. That role gave me an early view of how blockchain products are actually built - from token ecosystems and exchanges to DeFi platforms, wallets, market infrastructure and emerging Web3 business models.

Over the years, I have consulted on more than 50 crypto projects. Working across different stages of product development and growth taught me that crypto is not only about price charts. It is an intersection of technology, liquidity, community, incentives, psychology and execution.

My experience in the industry naturally developed into active participation

Beyond Trading

My work has also included interviews, online and offline sessions, trader education and discussions around asset management. I have trained and interacted with traders at different stages of their journey - from people entering crypto for the first time to participants trying to build a more disciplined trading process.

I believe Bitcoin and altcoins are part of a much larger shift in digital ownership and community-driven finance. The opportunity is significant, but so are the risks. That is why my approach is built around understanding the market, managing downside and treating trading as a process rather than a promise of quick returns.

MY PHILOSOPHY

"Markets change. Principles don't."

Learn continuously. Define the risk. Respect the market. Build conviction from research - not noise.

- SACHIN KUMAR**CRYPTO RISK NOTICE**

Crypto and Virtual Digital Asset markets involve substantial risk and volatility.
